Project Design Phase
Problem – Solution Fit Template

Date	19 February 2026
Team ID	LTVIP2026TMIDS83753
Project Name	Weather-Based Prediction of Wind Turbine Energy Output: A Next-Generation Approach to Renewable Energy Management

Problem – Solution Fit Template:

The Problem–Solution Fit means identifying a real challenge faced by wind farm operators and energy managers and ensuring that the proposed machine learning-based system effectively solves that challenge. It ensures that the developed solution directly addresses the practical difficulties in predicting wind turbine energy output and improves renewable energy management efficiency.

In the renewable energy sector, accurately forecasting wind energy production is a major challenge due to changing weather conditions and fluctuating wind speeds. Traditional estimation methods are often inaccurate and inefficient, leading to operational and financial uncertainty.

This project provides a real-time, machine learning-based prediction system that enables accurate estimation of wind turbine energy output using weather parameters such as wind speed and theoretical power.

Purpose:

- ❑ Solve energy prediction challenges in a way that aligns with the needs of wind farm operators and renewable energy managers. Succeed faster and increase your solution adoption by tapping into existing mediums and channels of behavior.
- ❑ Enable faster and more accurate decision-making by providing real-time wind energy output predictions through an interactive dashboard.
- ❑ Improve communication and operational planning by offering reliable predictive insights based on weather parameters.
- ❑ Increase system usability and trust by addressing frequent problems such as inaccurate forecasting and inefficient manual estimation methods.
- ❑ Understand the existing challenges in wind energy prediction and improve them using machine learning-based intelligent systems.
