Ideation Phase
Define the Problem Statements

Date	19 Feb 2026
Team ID	LTVIP2026TMIDS83753
Project Name	Weather-Based Prediction of Wind Turbine Energy Output: A Next-Generation Approach to Renewable Energy Management

Customer Problem Statement Template:

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love.

A well-articulated customer problem statement allows you and your team to find the ideal solution for the challenges your customers face. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

I am	Describe customer with 3-4 key characteristics - *who are they?*	Describe the customer and their attributes here
I'm trying to	*List their outcome or "job" the care about - what are they trying to achieve?*	List the thing they are trying to achieve here
but	Describe what problems or barriers stand in the way – *what bothers them most?*	Describe the problems or barriers that get in the way here
because	Enter the "root cause" of why the problem or barrier exists – *what needs to be solved?*	Describe the reason the problems or barriers exist
which makes me feel	Describe the emotions from the customer's point of view – *how does it impact them emotionally?*	Describe the emotions the result from experiencing the problems or barriers

Example:

I am	I'm trying to	But	Because	Which makes me feel
A wind farm operator	predict how much energy my wind turbines will generate	It is difficult to estimate power output accurately	Weather conditions change frequently and manual calculations are not reliable	uncertain about energy planning and grid management

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A power grid operator	Manage electricity supply efficiently	I cannot accurately predict wind energy production	Weather conditions constantly change	Frustrated and uncertain about grid stability
PS-2	A renewable energy company manager	Plan energy generation and distribution	Energy output fluctuates unpredictably	There is no reliable weather-based prediction system	Stressed about financial and operational losses
